(54) REMOTE MONITORING SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To realize real-time display function, without having to increase the load on a system.

SOLUTION: A server 102 receives a data, showing that a state change has occurred in a facility from a BA system 1, converts this data, when it is data preliminarily requested by terminal devices 6, 201, 301, 401, and 501, into a message readable by the users of the terminal devices, and returns the message as the response to the request to the terminal devices by the use of HTTP program. The terminal devices 6, 201, 301, 401, and 501 preliminarily request desired data to the server 102 by use of HTTP program and display the message returned from the server 102, as the response to the request.
